

A ROAD PAVED WITH GOOD MECHANICS:
How ULSD Lubricity Issues Continue to Plague the Transportation Industry

ULSD and higher diesel fuel grades, which are more expensive than conventional diesel fuel, are being used in a variety of applications, including in the transportation industry. This is due to the fact that ULSD is required for use in many new engines, and it is also being used in older engines to improve performance and reduce emissions. However, the use of ULSD can lead to lubricity issues, which can cause engine wear and tear. This is because ULSD does not contain the same amount of sulfur as conventional diesel fuel, and this can lead to a lack of lubricity. Lubricity is the ability of a lubricant to reduce friction between two surfaces, and it is essential for the proper operation of an engine. Without adequate lubricity, the engine will experience increased wear and tear, which can lead to costly repairs and downtime. Therefore, it is important for transportation industry professionals to be aware of the risks associated with ULSD and to take steps to ensure that their engines are properly lubricated.

"In addition to giving our loyal consumers a trucking lubricant that outperforms the competition, it provides an earth-friendly option for the environmentally-conscious customer."

Camie-Campbell Releases Earth-Friendly Trucker's Lubricant

Tom's Secret Formula Trucker's Lubricant part of new biodegradable line

Camie-Campbell has announced the release of Trucker's Lubricant as part of the company's Tom's Secret Formula Earth Friendly line of lubricants. The new product is designed for lubricating tandem slides and metal trucking components for commercial and industrial use.

"Trucker's Lubricant is a welcome addition to the Tom's Secret Formula line," said Tom Shelby, CEO of Camie-Campbell. "In addition to giving our loyal consumers a trucking lubricant that outperforms the competition, it provides an earth-friendly option for the environmentally-conscious customer."

Trucker's Lubricant is formulated with optimized USA-grown vegetable oils and selective additives. The lubricant clings to the surfaces, reducing waste and clean up and does not evaporate so it provides lubrication longer than conventional petroleum-based products. Unlike typical petroleum products, all Tom's Secret Formula lubricants are environmentally friendly, nontoxic and provide no danger of polluting the water, soil, or work environment.

"This product is as safe on trucks as it is on the environment," Shelby said. "Trucker's Lubricant is a great industrial product that outperformed conventional mechanical lubricants in terms of lubricity and anti-wear properties."

For more than 50 years, Camie-Campbell has provided the lubrication industry with the

highest quality of products at a value-driven cost. Committed to the highest level of service, quality and value to their customers, Camie-Campbell is environmentally conscious and is proud to be at the forefront of the lubrication industry.

Manufacturing and packaging high quality products for more than 50 years, Camie-Campbell offers spray adhesives, silicone lubricants, cleaners and degreasers. Camie serves a variety of industries including screen-printing, injection molding, furniture, sewing and upholstery, construction and maintenance applications. All Camie-Campbell products are available through an extensive nationwide network of distributors. Camie-Campbell also features specialty formulations and private label products. □
